Automated Guided Vehicle

Proxaut's Shuttle AGV is a compact and efficient automated guided vehicle compliant with VDA 5050 protocol and designed for optimized material handling, even in tight spaces.

Proxaut announces the launch of the Shuttle AGV, a state-of-the-art Automated Guided Vehicle designed to optimize efficiency in material handling. This innovative AGV is set to redefine operational workflows with its compact, space-saving design, making it ideal for narrow paths and reduced maneuvering spaces.

The Shuttle AGV offers a suitable version for sanitization, ensuring high standards of hygiene in operations. It features advanced automation for picking up and dropping off load units, delivering high-efficiency throughput. Facility owners and senior management will find the Shuttle AGV to be a sound investment offering quick ROI. Project engineers and service technicians will benefit from

its easy regular maintenance, requiring only one annual check by Proxaut technicians.

Distinguished by its VDA 5050 protocol
